

# Markdown to PDF

---

**We've converted 1,309,795 Markdown files to PDF and counting!**

To convert your Markdown to PDF simply start by typing in the editor or pasting from your clipboard.

If your Markdown is in a file clear this content and drop your file into this editor.

**tip:** click on the pencil icon on the left to clear the editor)

## Classic Markdown to PDF1

---

If you have an account at classic Markdown to PDF don't worry your files are safe and you can login at [classic.markdowntopdf.com](https://classic.markdowntopdf.com).

## Privacy First

---

Unlike version 1 of Markdown to PDF your content is no longer stored in a file before being read/converted and subsequently removed from our servers. Instead your content is now sent securely via our API before returning the converted file so your data is never stored.

## GitHub flavoured styling by default

---

We now use GitHub flavoured styling by default.

## Image Support

---

Images are base64 encoded into the PDF document so images do not embed the remote source that could go offline rendering your image broken and of course do not require an internet connection.

## Next...

---

Up next we're working on Emoji support 🍌
